The explanation is to imagine a section of pipe connected in a water system. This is for water to flow through it, and if we stop to think about it, we will realize that a short pipe offers less obstruction to the flow of water than does a long pipe. It is also true that the water can flow more readily through a series of small screens than through a series of large ones.

We can conclude therefore, that the resistance to the flow of water through this special pipe depends on three things: the size of the pipe; the length of the pipe; the size of the holes in the screen mesh. Now, if we carry this same line of thought over into the field of electricity, we will find that an electrical resistor is quite similar to this pipe.

A measure of the effectiveness of our components for civilian use continued to be a large part of our business. The military components were progressively brought into use.

We know that a large diameter wire has less resistance than a small diameter wire to carry the same current. At the same time, we know that a large diameter pipe will let the same amount of water flow through it more readily than a small diameter pipe would.

Miniature metal clad capacitors continued to be the largest item of our military volume. Other products of prime military use were printed circuit, ceramic capacitors, hermetic resistors, and precision bobbin resistors.

There seems to be an endless parade of drives to raise money—but do we stop to think that the reason for these appeals is an endless financial aid, but consists of the services resulting from long study of or counseling, and other services in treatment and training centers in every state, the District of Columbia, Alaska, Hawaii, and Puerto Rico. We can all help financially by contributing to the fund.

But, there is another way in which we can help. This picture shows Joanne and Patty Lee Kelly, daughters of Josephine Kelly of Flat Streets, visiting the Shriner's Hospital in Springfield one afternoon. Joe Kelly, a member of the Tatro, Lillian Forbush, Erminia Sweeney, Margaret Dague, Jane Paradise, Lea Perras, Ann Masson, Joan Farrin, Dubreuil, Lea Walden, Margery Richer, Jennie Hirst, and Marie Rose LaFlamme, Lorraine Stahelek, Rita Johnson, Betty Gallese, Jennie Garceau, Dorothy Brothers, Cora Ryan, Susan Bishop, and Veronica Sobon.

The fixed focus camera similar to G. M.'s and incidentally, most box cameras also disagreeable?—for blurred pictures; maybe you will find it better to use a Brownie "260," The use of a tape measure is a standard measurement; the distance between finger tips when holding the arms extended in acupuncture fashion is approximately one foot. If your camera is of the adjustable focus type without the above mentioned features, care must be taken every time you take a picture that the correct distance is set on the focusing knob. A tape measure is needed to take pictures and use a clean, starch free cloth for cleaning. Some cameras are equipped with a couple of rangefinder or ground glass focusing features, and generally there is no focusing problem here.

And our eyes can with us picture all things as they pierced the hands of Jesus—"He was crucified for us was He—crucified for us—crucified for me and you—" And searching, let's remember, "Jesus Christ, Our God's Own Son!"

As for your children—no one ever take the level of care they had planned. The British outer posts were captured, and General Stark's line was broken.

If, as far as the first three questions go, you have not notified the Personnel Officer that you are going to leave—do it right now. If you think your work with just a few minutes accomplished is more difficult to work with just a few minutes accomplished than a hour, write and tell why and ask for a job that is less difficult. Rain fell in torrents so heavy that American skirmishing parties only occasionally ventured out of the trench. If, as far as the first three questions go, you have not notified the Personnel Officer that you are going to leave—do it right now. If you think your work with just a few minutes accomplished is more difficult to work with just a few minutes accomplished than a hour, write and tell why and ask for a job that is less difficult.
Appointment of Carroll G. Killen as Manager of Field Engineering has been announced by Mr. Julian K. Sprague, president.

Carroll G. Killen Named to Head Up Sprague Field Engineering

Field Engineering

Mr. Killen, formerly chief application engineer of the company, now heads up the training and direction of all field engineers. Sprague field engineering personnel at Washington, D.C., Dayton, Ohio, and Valley City, California, as well as at North Adams will be under his supervision.

New Dayton Manager

A graduate of both Louisiana State Normal College and of Louisiana State University, Mr. Killen is a member of the American Institute of Electrical Engineers. He was formerly a radio engineer with the Signal Corps Laboratories at Fort Monmouth, New Jersey, and has served as a Force communications officer in the Philippine Islands during World War II. Mr. Killen served as an Armed Forces representative on committees drawing up joint Army-Navy-industry specifications for electronic components during the early part of the war.

He is now serving as a civilian member of the subpanel on capacitors of the Research and Development Board of the Institute of Radio Engineers. A native of Provencal, Louisiana, he attended the public schools in Nachitoches, Louisiana, where his parents still reside.

Mr. Killen and his wife, the former Clara Battle of Nachitoches, and their three children make their home in nearby Bennington, Vermont, where they are active in village affairs.

Appointment of Leon Podolsky to the newly created post of Technical Assistant to the President has been announced by Mr. J. K. Sprague. His duties will include those of technical assistant to Mr. C. G. Killen. Mr. Podolsky will continue his present duties which include serving as Manager of the Moduline Outage Monitor and technical advisor to Mr. C. G. Killen. Mr. Podolsky has been with the Sprague organization for many years.
There are feather-light clouds in the sky that temper the crisp coldness of the mountain air. You dig your poles into the firmly-packed snow as you glide down the mountain. Worldliness comes over you, filling your body with energy. A whistling song fills your ears as you speed faster and faster, trying to avoid collision with someone else who has the same idea.

You reach the bottom and a breaker of blinding snow迎comes at you. You must start again to the top of the mountain. Once at the top, you cozy up before the blazing fire at the ski hut, sipping hot cocoa and telling tall stories.

Then once more, you are back at the top, gliding down at the tiny farms of others reaching the bottom. You can see the winding, twisting snow-blanketed mountain as you go.

**Department News**

**Paper Rolling Department (Night Shift)**

By Lillian Stachekl

We welcome back Alice Major who had been transferred to another department.

**Industrial Oil Rolling**

By Erminia Sweeney

In sick bay are Mae Tyler, Margaret Whalen, and Dorothy Bastur. Margaret Whalen has been transferred to the Brown Street plant. She is now working at Beaver Street in Paper Rolling. She was transferred from the Shipping Department recently. She seems to like the new job. We wish her well in her new position.

**Industrial Oil Rolling (Night Shift)**

By Lillian Stachekl

We welcome back Alice Major who had been transferred to another department.

**Bathtub Assembly**

By Leona Dansault

We are glad to see George Whipple back to work after a long illness. You know, Ed Sprague is a doctor away. We sprague should never need a doctor. We wish to do something for Ed. We've invited him to a bake sale that we are going to have on Saturday.

**Filters**

By Ginger and Rhicher

The department had a wonderful time at the Farewell Party for Marion Stratton and Cleon Parot. We had a great time and everyone was happy to see them go. We wish them well in their new positions.

**Building No. 3**

By Bready

Mirtz Williams recently began work at the department.

**Block Annex**

By Della Keating

Lorraine Farmer has left for a while. She is going to see her sick cousin in the hospital. We wish her a speedy recovery.

**Misc. Resist Assembly**

By Jean Levy and Rita Brooks

Ann Mariani, who is back to work again after being out for a month, had a wonderful time at the department's birthday party. She is now working on the assembly line and she says she is enjoying herself.

**Employe Relations Division**

By Marie Kirkpatrick

Welcome to Vasilly De Samsonov who started work on March 25. Vasilly has been with Sprague Electric for five years. He is a very talented employee. We wish him well in his new position.

**Production Engineering**

By Darnier Langer

Leona Hurlbut has the mumps... Betty Fairbanks is enjoying a vacation... Lois Caprilli is back to work after spending a week taking care of her sick mother... Betsy Fairbanks and Margaret Ecker are back from vacation. We welcome them back to work.

**Mica Mutterings**

By Roseanne Vigna

A speedy recovery is wished to Mary Trois, our supervisor, and to Emma Piallo who are on sick leave. We welcome back June Cole, who had been out on leave for a week. She is now working at Beaver Street in Paper Rolling. She was transferred from the shipping department recently. She seems to like the new job. We wish her well in her new position.

**Wire Coating**

By Betty Jangrow

1st Shift

Philip Gage and Bert Sacco for the Allans' wedding reception. They are leaving the department soon to take a trip to Europe. We wish them both the best of luck.

2nd Shift

Ruth Otowski who recently had her tonsils removed at the North Adams Hospital. She has been transferred to days with us.

**Molding Tubular Finish**

By Art Van Steenbrom

Lillian Cortis and Florence Dupre are back on the day shift. Joe Comar has been promoted to the marketing department in the Paper Rolling department. He is now working with the sales department. He is doing a wonderful job.

**Misc. Resist Assembly**

By Jean Levy and Rita Brooks

Ann Mariani, who is back to work again after being out for a month, had a wonderful time at the department's birthday party. She is now working on the assembly line and she says she is enjoying herself.

Western Electric D. T. Q.
By Horner

We wish to welcome George Daus from our department. We were very glad to see Hattie Hay looking so good after her leave of absence. Nice to have you back again, Hattie. Congratulations to Hallett Riggs on his recent marriage and also Rox Russell's new play, Wonderful Town. La Traviata and Don Giovanni were two of the operas.

EASTER EGGS FOR THE WHOLE FAMILY

Easter is a time for decorating eggs. This really means to create a work of art out of the lovely egg. Everyone in the family can join in the fun and help the children.

Eggs are plentiful and inexpensive around Eastertime, so it's not extravagant to use a few more of them. Besides they can always be eaten when they're freshly hardboiled. If they're boiled, the contents will have been eaten up before in an omelette or scrambled eggs or in a cake. It takes a little more time to blow out the eggs. Do it by making a small hole at each end of the egg with a darning needle. Stick a small piece of tape over the ends so they won't crack. Eggs that are blown need more careful handling than the fresh boiled eggs.

White eggs take dye easier than brown ones. Beet juice will make red eggs, and green dyes will make green ones, spinach juice green ones. Of course you can always get a ten cent package of dyes for a wider assortment of colors.

Try your hand at making the eggs a little different this year. With a few odds and ends, such as tiny tulle, crepe paper, feathers, pin-cushions and a roll of cellophane tape, you can get unusual effects.

An Easter bunny, for instance, can be made by cutting and rolling a bit of cotton into the form of ears, then tucking a tail of absorbent cotton to one end of the egg with a little cellophane tape and sticking them firmly on the form. If a dab of cellophane tape is put under the eyes, nose and mouth and whiskers with colored crayons. Make a number of these little bunnies and put them inside Easter baskets and let in a Nest of Easter grass. The, the eggs are just the right size. Fill them with your little Easter gifts and see how much the children love them.

Recipe

Since the first recipe appeared a few weeks ago in the LOG, many of the readers have been sampling each other's recipes for Banana Bread. Betty Barcomb, the Home Demon, has added another recipe in the following which is Kitty Markey's.

BANANA NUT BREAD

2 cups shortening
1 cup sugar
2 eggs, well beaten
1 tsp. vanilla
1 1/4 cups all purpose flour
1 tsp. soda
1/2 tsp. baking powder
1/2 tsp. salt
1 cup mashed bananas
1 cup walnuts chopped

Bake in a moderate oven 350° for one hour

Basketball

This report is in a little late we realize but we must be reminded of the past season finishing a partially new Williams Five improve as the season closes.

With two sophomores Tony Moro and Ronnie Wilson, the Purple began its' final strike in the season. The team had the satisfaction of closing out its season with a well-deserved win over arch rival Amherst in the home gym after a packed house.

Walt Creer, former local boy and former Pitt Hart High star put on an exhibition that will be remembered for some time. His uncanny dribbling is something to watch at the ball while dribbling; instead, he is continually taking the opposing player out of position. And just for use of the same high order. Walt is a team player, a clean athlete, and a credit to the sport.

[Hockey

At last the new ice hockey rink has been completed. Williams has played two informal games already and Midldebury showed the Purple how to play. However, now that the Williams students will have their own rink we look forward to the game. Their hockey should be played.

Swimming

How does he do it? That is the question that seems to be asked every time a visitor visits the Lassell pool and each year finds Coach Bob Shur with another champion. Love this man has been no exception, for just recently the Williams Ducks won the New England College Championship.

Dick Martin, "The Fish," as he is affectionately called has shattered records in the 50 yard, 220 yard, and helped to set a new record in the 440 yard relay.

He has been unoffically clocked at 49.5 for his quarter of the relay. This was a tenth of second faster than the 1952 record.

Yes, true fans, if you want to see championships, go to Lassell pool and watch the masters of Williams.

SONNY STACKPOLE

Sidney, "Sonny", Stackpole, daughter of William Stackpole of Foul Preparations, appeared on Juvenile Jambo over television station WGBY in Schenectady on Saturday, March 7. Sonny, who is ten years old, did a fine job of narrating the program. She was one of the first persons in Berkshire County to appear on television. Sonny, for she made her TV debut in 1948 when she was just five. She has often danced in entertainments presented here, in Greenfield, Pittsfield, and other area cities.

Sonny, a brother, Terrell and Character, are talented pianists. Terry has played in many recitals at the Berkshire Music Center. His uncle is Bernard Stackpole of the Foul

SPORTS Victory for Adams High

A solution to a pallid band of hunters, Adams High, who despite great odds and with a terrific spirit to win the Berkshire League title are making their first honor in the Western Massachusetts tourney and thus qualify to represent Adams in the Western Massachusetts tourney in New England Tourney to be held in Boston this summer.

It will be many a day before you will see a dark horse like Adams play such stellar football at any tournament. Not only did they do it, they did it on the way to see Congrats Chat Zeh and his boys win the Berkshire title in the Western Massachusetts tourney and thus qualify to represent the Western Massachusetts in the New England Tourney to be held in Boston.
